

Boost+

Open-time extender

Description

Colourless additive for all water-based paints and lacquers. Extends the product's open time to optimise application and achieve a uniform finish free from lap marks. Particularly recommended for large surface applications and for projects exposed to high temperatures, low humidity or draughts.

Application instructions

Add up to 5% BOOST+ to single-component waterborne paints and coatings. Thoroughly homogenise the mixture before application.

Mixture preparation

Maximum dosage: 5%.

Use BOOST+ undiluted. Do not dilute before adding it to the paint or coating.

Recommendations for use

Always verify the compatibility of BOOST+ with the paint or coating by carrying out a preliminary test on a small test area before application to the entire substrate.

Properties

Density: ± 1.38

Characteristics

- Extends the open time of waterborne paints and coatings.
- Improves application properties and finish quality.
- Reduces the risk of lap marks and visible overlaps.
- Facilitates application on large surfaces and complex substrates.
- Recommended under accelerated drying conditions (high temperatures, low humidity).
- Compatible with single-component waterborne paints and coatings.
- Maximum dosage: 5%.

The effectiveness of our products and systems is based on in-depth laboratory research and many years of practical experience. However, we accept no liability for any problems that may arise, as the final result may be influenced by a number of factors of which we are not necessarily aware. 24/09/2026 version.
